Dear Scribe hiring team,

I am writing about the Solutions Engineer role for Workflow AI, on the new team around Scribe Optimize. The posting is pre-sales: discovery with an account executive, a proof of concept tied to the customer's own workflow, and an ROI number from that workflow. I live in Emeryville, so the SOMA office days are a commute I can make.

Scribe Optimize captures how work happens and attaches an ROI figure. My own method starts one step earlier: I map the process with the people who run it, then measure the change. You ask for five or more years in solutions engineering or technical account management. From October 2023 I have sold and delivered my own AI engagements, and from August 2018 to December 2020 I wrote down how support work moved at IBM. I have not worked in Salesforce, ServiceNow, or SAP.

How I would run the technical layer of a deal:

- **Discovery, then a paid pilot:** process mapping, a written scope, and the workflow built in the customer's environment. Claude Code is the tool I use to iterate prompts with them watching.
- **ROI from their baseline:** 98% less processing time on one assessment, 99.8% more ingestion throughput and 86% less cost on another. The number is the baseline, not a slogan.
- **Output quality:** I separate the model that scores from the model that generates, and I have held a score to 95% agreement with human reviewers. The second engagement of that shape starts from the written spec.

Thank you for your time and consideration. I would welcome a conversation about the first Scribe Optimize proof you want this team to be able to repeat.

Sincerely,

Ethan Zaruba-Walker
