Dear Scribe hiring team,

I am writing about the Solutions Engineer role for Workflow AI, on the new team around Scribe Optimize. The posting is pre-sales: discovery with an account executive, a proof of concept tied to the customer's own workflow, and an ROI number that comes from that workflow rather than from a slogan. I live in Emeryville. Hybrid days in SOMA, and travel up to 30%, both work from here.

Scribe's product captures how a team actually works so people and agents can reuse it. That is the first week of every engagement I run. I will name the gap in the same paragraph. You ask for five or more years in solutions engineering or technical account management. I have three years selling and delivering my own AI engagements, plus two and a half years at IBM writing down how support work moved. I have not administered Salesforce, ServiceNow, or SAP. I map the process those systems sit inside, and I measure the before and after.

How I would run the technical layer of a deal:

- **Discovery and the proof:** process mapping, a written scope, and a configured slice in the customer's environment. Claude Code is the tool I use to iterate prompts and workflows with them watching.
- **ROI from their baseline:** 98% less processing time on one assessment, 99.8% more ingestion throughput and 86% less cost on another. The number is the baseline, not a slogan.
- **Output quality and the playbook:** I separate the model that scores from the model that generates, and I have held a score to 95% agreement with human reviewers. The second deal of that shape starts from a playbook.

Thank you for your time and consideration. I would welcome a conversation about the first Scribe Optimize proof you want this team to be able to repeat.

Sincerely,

Ethan Zaruba-Walker
