EXPERIENCE

StaffRoom AI

Emeryville, CA

Founder & AI Solutions Consultant

October 2023 - Present

- Own the technical layer from first call through a proof: map how the work actually happens, then design the workflow AI should run. Engagements reach \$18K and are scoped in an SOW before the build.
- Build the ROI from the customer's own baseline. An MSP pre-sales assessment fell 98% in processing time. An ingestion pipeline rose 99.8% in throughput and fell 86% in cost.
- Speak fluently about LLM behavior: prompt design, output quality, and a separate evaluation model held to 95% agreement with human reviewers before the score was trusted.
- Turn one engagement into a playbook. n8n workflows, written specs, and EZ-AI training so the second team does not start from a blank page. Claude Code is the daily build tool.
- Carry field evidence back to the build: what the review gate caught, which step was still manual, and what the next version has to do.
- Configure the proof in the customer's environment, not a generic demo: API integrations in Python and TypeScript, including OAuth and live connectivity tests.
- Translate the same design to an executive and to the person who does the task. The operator remains the decision-maker on what ships.

IBM

Austin, TX

Data Engineer / Cognitive Software Engineer, Customer Support

August 2018 - December 2020

- Documented how support work actually moved, in release notes and in Design Thinking sessions, then put DRE Bot in Slack so the repeated case resolved in one response.
- Removed 1-3 hours of log-prep per case with IBMLogAnalyze and showed the operational result to C-level readers in Tableau and Cognos.

EDUCATION

University of Colorado Boulder

Boulder, CO

B.S. Information Science; Major GPA 3.7 | Certificate of Cognitive Science

August 2018 - May 2023

IBM

Online

Systems & Solutions Architecture Professional Certificate (in progress)

expected July 2026

- BPMN and process improvement: drawing the workflow before automating it.

SKILLS

Pre-sales: discovery, proof-of-concept design, ROI from measured baselines, playbooks, GDPR-scoped data pipeline at IBM. **Workflow AI:** process mapping, prompt design, output-quality evaluation, n8n, Claude Code, MCP, Python, SQL, TypeScript.
