EXPERIENCE

StaffRoom AI Emeryville, CA
Founder & AI Solutions Consultant October 2023 - Present

- Own technical delivery after the contract is signed: discovery, statements of work, and milestone-gated builds up to $18K, with the operator kept as the decision-maker on each account.
- Map the process, connect the dependent systems, and structure customer data so the automation runs on live records.
- Automated an IT MSP's pre-sales cybersecurity risk assessments, then trained that team to run and extend the workflow. Processing time fell 98% against a measured baseline.
- Designed a Notion content system and trained the operators to run it. Agency production volume increased 10x.
- Ship connected systems past prototype: Notion API integrations in TypeScript and Python, JSON payloads, Git, and CI that tests live API connectivity on each change.
- Build with MCP servers and production LLM workflows across Claude, OpenAI, and Gemini. Claude Code is the daily driver for agent tooling on live accounts.
- Designed a content-scoring evaluation from the client's ground truth. Agreement with human reviewers reached 95%.
- Turn each deployment into the next change: a post-launch backlog, measured results, and reusable workflow patterns the customer's team keeps building after handover.
- Modernized a data-ingestion pipeline. Throughput increased 99.8% in four months and cost fell 86%.
- Delivered EZ-AI, problem-first fluency training so operators can judge and extend the system after handover.
- Ingested federal case documents for an anti-trafficking nonprofit and powered its client-facing analytics dashboard.
- Shipped a public Notion OAuth app in TypeScript and a Whisper-to-Notion pipeline, with CI that tests live API connectivity.

IBM Austin, TX
Data Engineer / Cognitive Software Engineer, Customer Support August 2018 - December 2020

- Built DRE Bot, a Watson NLP Slack app that surfaced similar past cases, cutting common issues to one response.
- Ran Design Thinking with technical and non-technical stakeholders, then wrote release notes for each change.
- Designed IBMLogAnalyze, a GDPR-compliant pipeline and dashboard. Log-analysis prep fell from 1-3 hours to zero. Tableau and Cognos dashboards went to C-level operators.

Valhalla Healthcare Remote
Machine Learning Engineer (Intern) May 2021 - August 2021

- Built a Python model that turned handwritten clinical notes into a structured data model (F1 80.03).

EDUCATION

University of Colorado Boulder Boulder, CO
B.S. Information Science, Major GPA 3.7; Certificate of Cognitive Science August 2018 - May 2023

IBM Online
Systems & Solutions Architecture Professional Certificate Completed 2026

- Business process modeling and improvement, IT systems design and analysis, cloud-native delivery, DevOps, and Agile.

DeepLearning.AI Online
Deep Learning Specialization; TensorFlow Developer Professional Certificate 2020 - 2021

SKILLS

Client delivery: process mapping, system connection, data structuring, operator enablement, executive communication.

Agent stack: Python, TypeScript/JavaScript, JSON, Git, MCP, Claude Code, n8n, Claude/OpenAI/Gemini APIs.

Data and proof: SQL/PostgreSQL, human-agreement evaluation, milestone acceptance, post-launch backlog, reusable patterns.

Field tools: Docker, GitHub Actions, Slack API, Figma process diagrams, Tableau, Cognos, Vercel.

Handoff: operator training after go-live, measured baselines, human-agreement checks, and a backlog the customer team runs.
