Dear AllTrails hiring team,

I am applying for the Growth Product & Business Analyst role. I am based in Emeryville, in range of the San Francisco office, and I want the job of measuring how Base, Plus, and Peak membership actually get more people outside.

Every day your team works to get more people outside and help members have better experiences on the trail. That is the KPI I want to sit with: who converts, who stays, and whether a launch actually gets them out the door. I live and work aboard MARGARITA, a 1966 sailboat on the SF Bay, hold AIARE 1 and an EMT credential, and built Oasis, a CU Boulder capstone that aggregated campground, weather, and wildlife data so people could plan time outside. Stewardship is one of your values. The 2026 Stewards Fund, with Expedia's match, is the public version of that commitment.

I have spent the last three years owning discovery, measurement, and delivery as a solo consultant. I want that ownership on a team, next to your product managers, finance analysts, and marketers. How I would contribute:

- **SQL, Python, and dashboards:** I pull and join large datasets in SQL, analyze them in Python, and put the argument in Tableau so a room shares one definition of the metric. At IBM I launched C-level BI dashboards and shipped IBMLogAnalyze, a SQL pipeline that cut per-case log prep from 1-3 hours to zero.
- **Warehouse tables:** at StaffRoom I modernized a data-analytics ingestion pipeline (throughput up 99.8% in four months, cost down 86%) and built Python/SQL pipelines into analyst-facing tables. I have not used dbt as a core tool.
- **Diagnosing growth numbers:** I have not designed B2C mobile subscription incrementality tests. At Wiz Music I segmented Discord churn by tenure and joins by source, showed that reported membership growth was not organic, and raised it with the team. I would bring that habit to conversion and retention reads.

I can come to the San Francisco office one day a week, including Trail Days. Thank you for your time and consideration. I would welcome a conversation about how you measure conversion and retention across Base, Plus, and Peak.

Sincerely,

Ethan Zaruba-Walker
