Dear Notion hiring team,

I am writing about the Commercial Outcomes Architect role in San Francisco. For three years I have run client engagements end to end: discovery with the stakeholders, workflow co-design, building beside the team rather than for them, and staying until the workflow is theirs and they run it without me. I am based in Emeryville, so onsite in SF is a short commute.

Why this seat, and why now: Notion prices agent work in credits, and Workers move onto the same meter in October. That makes adoption and revenue the same number, because a workflow nobody runs is a credit nobody consumes. Getting that right is a builder's problem more than an account-management one, and it is the part of this job I want.

Here is how that maps to what you need:

- Adoption and value realization: I automated an IT MSP's pre-sales risk assessments, cut processing time 98%, then trained their team to run and extend the workflow themselves. I judge an engagement on what the client still operates after I leave.
- Technical fluency in Notion specifically: production Notion API integrations, a public OAuth Connections app, a sample Worker, a Whisper-to-Notion pipeline with CI against the live API, and a version-controlled mirror of an entire workspace with architecture decision records. I can co-design and troubleshoot a workspace without a specialist in the room.
- Commercial ownership: I scope, price, and close my own engagements, then carry the outcome. When delivery slips there is no renewal and no referral, so value realization has never been someone else's job. A book of named accounts at Notion's scale is the one piece I would be doing for the first time; the accountability underneath it I have carried since 2023.
- Building with AI daily: MCP servers, Claude Code, and agent tooling across the Claude, OpenAI, and Gemini APIs.

"Great work is still fundamentally human" is not a line I picked up from your careers page for this letter. It is the principle I started my consultancy on: every system I have built keeps the person as the decision-maker and takes the busywork off them. Your posting asks this person to help build and deliver OA programs across Notion's install base, and I would rather help write those playbooks than inherit them.

Thank you for your time and consideration. I would welcome the chance to talk about the flat and at-risk accounts you are trying to move back onto a clear value path.

Sincerely,

Ethan Zaruba-Walker
