[LinkedIn](#), [GitHub](#), [Portfolio](#)

AI solutions consultant who redesigns business processes end to end and embeds human-in-the-loop agents so intake, triage, and reporting move faster without losing auditability. Three years of discovery, current- and future-state mapping, and change enablement; production Notion API systems (OAuth Connections, data sources, webhooks); agents and structured skills via Claude Code and MCP. Measures success on cycle time, quality, adoption, and whether the team can run the workflow without me.

Core Competencies

- **Process & systems design:** discovery, current- and future-state mapping, runbooks, operating models; intake, triage, routing, approvals, escalations, and reporting, with states, handoffs, and auditability
- **AI enablement:** human-in-the-loop patterns (assist, automate, approve, audit) with a reviewable trail; agents and structured skills; prompt and tool design; evaluation for quality, reliability, and edge cases (Claude Code, Claude / OpenAI / Gemini APIs, MCP)
- **Notion platform:** production API integrations (OAuth Connections, scopes and permissions, data sources, pages, comments), webhooks, hosted MCP, workspace and information architecture
- **Workflow automation:** n8n, APIs / webhooks / connectors, Slack apps, Python and TypeScript / Next.js; design for handoff so business teams operate the system independently
- **Instrumentation & change:** cycle-time, quality, and adoption metrics, iterated with stakeholder feedback; BI dashboards (Tableau, Cognos); workshops, enablement, and Design Thinking facilitation

Professional Experience

- **StaffRoom AI** **Emeryville, CA**
Founder & AI Solutions Consultant *2023–Present*
 - Sell and deliver AI-automation engagements end-to-end across agencies, IT, and media: discovery, current- and future-state process maps, stakeholder workshops, SOWs, and milestone-gated delivery for clients up to \$18K
 - Led discovery, design, and implementation of a Notion-based content system that 10x'd agency production volume; owned stakeholder enablement and change management so the operating model stuck
 - Designed intake, routing, and reporting for an IT MSP's pre-sales cybersecurity risk assessments, cutting processing time 98%; left runbooks and trained the team to run and extend the workflow without me
 - Built production Notion API integrations in TypeScript and Python: public OAuth Connections app, data-source and page workflows, comments polling, and a Whisper→Notion pipeline with CI against the live API; daily agent work with Claude Code, structured skills, and hosted MCP
 - Designed human-in-the-loop evaluation for MediaMark Spotlight (LLM-as-a-judge): rubric from client ground truth, 95% human-agreement bar, n8n event-driven agent workflows, and a triple-gate so AI scores, humans approve, and the trail shows what the model did
 - Delivered EZ-AI, problem-first AI-fluency training for domain experts, so the people who own the process can judge and extend the system themselves
- **Wiz Music** **Barcelona, Spain**
Community Development Intern *2022*
 - Diagnosed a Discord community from its own analytics (churn by tenure, joins by source), identified that reported growth was not organic, and raised it with the team; configured artist feeds and ran an AMA against the remaining engagement gap
 - Engineered Python automation and Chartmetric API work to streamline artist and investor outreach

- **Valhalla Healthcare** **Remote**
Machine Learning Engineer (Intern) 2021
 - Designed and shipped an ML model translating handwritten clinical notes into an extensible data model (F1 80.03), with evaluation against edge cases before release (Python, Keras, TensorFlow, Docker)
- **IBM** **Austin, TX**
Data Engineer / Cognitive Software Engineer 2018–2020
 - Built DRE Bot, an internal Watson NLP Slack app that triaged incoming support cases against similar past issues and routed engineers to a single response for the most common ones; containerized on IBM Cloud
 - Designed and deployed IBMLogAnalyze: GDPR-compliant client-data pipelines and an analytics dashboard, eliminating 1–3 hours of log-analysis prep per case and leaving an auditable trail
 - Launched BI dashboards for C-level operational metrics; led Design Thinking sessions; authored release notes and documentation so stakeholders could operate through ongoing application changes

Education

- **University of Colorado Boulder** **Boulder, CO**
B.S. Information Science 2018–2023
 Major GPA 3.7 · Certificate of Cognitive Science · Dean's List (Fall 2019, Spring 2023). Coursework: User-Centered Design, Community-Based Design, Applied Machine Learning, Cognitive Science.
- **IBM** **in progress, expected Jul 2026**
IBM Systems & Solutions Architecture Professional Certificate 2026
 Completed: IT Systems Design and Analysis; Business Process Modeling, Analysis and Improvement (BPMN, Lean); Cloud Native, DevOps, Agile.
- **DeepLearning.AI / Coursera**
Deep Learning Specialization & TensorFlow Developer Professional Certificate 2020–2021

Languages

- English (native), Spanish (conversational).

Honors and Awards

- **2nd Place, Hackathon for Racial Justice**, IBM, Team Lead / Data Scientist (2020).
