

Ethan Zaruba-Walker — Developer Advocate (Notion)

[✉ ethan@staffroomai.com](mailto:ethan@staffroomai.com) • [\(512\) 694-4844](tel:(512)694-4844) • [📍 Emeryville, CA](https://www.google.com/maps/place/Emeryville,+CA) • [🔗 GitHub: https://github.com/EZ-Walk](https://github.com/EZ-Walk)

Howdy, I'm a builder and technical communicator who has been shipping on the **Notion API for years**. I care about people's relationship with technology and about getting genuinely useful tools into as many hands as possible. I've grown a creator community abroad, shipped ML tools that non-experts could actually use, and now run an AI consultancy from a 1966 sailboat on the San Francisco Bay. I want to be **Notion's first Developer Advocate** because the new Developer Platform is exactly the AI-native, community-led surface I most want to help builders discover and ship on.

Skills

- **Developer relations & experience:** Technical writing, API docs & release notes · demos & sample apps · community building · onboarding & enablement
- **Notion platform:** Notion API (data sources, pages, comments) · webhooks · workers · Notion-flavored Markdown · workspace & information architecture · public-integration OAuth / Connections
- **Languages & stack:** TypeScript · Python · Neo4j Aura / Supabase · Vercel · Git

StaffRoom AI — Founder & AI Solutions Consultant

Oct 2023 → Present

- Build production integrations on the **Notion API** across TypeScript and Python making Notion the system of record for client workflows.
- Architected and shipped **Notion-based operating systems** for agency and MSP clients, owning discovery → design → enablement and change management.
- Modernized a data-analytics platform's ingestion pipeline, **increasing throughput 99.8% in 4 months while cutting cost 86%**.
- Built data platforms and partnerships to **accelerate solutions to human trafficking**.

- *Stack: TypeScript, Python, Notion API, MCP, PostgreSQL, Vercel, Docker, n8n, Claude / OpenAI / Gemini APIs.*

Wiz Music — Community Development Intern

May → Jul 2022 · Barcelona

- Grew and stewarded the **Discord community** around a Web3 music startup, driving engagement across a global, multilingual (English / Spanish / Catalan) creator audience.

Valhalla Healthcare — Machine Learning Engineer

May → Aug 2021

- Researched, built, and shipped an ML model translating handwritten clinical notes into an extensible data model — putting a usable AI tool in front of a non-technical team. (*Python, Keras, TensorFlow, Docker*)

IBM — Cognitive Software Engineer / Data Engineer / Research Intern

Aug 2017 → Dec 2020

- **Authored and published release notes and documentation** that guided stakeholders through ongoing application changes.
- Designed and integrated an ML application **into Slack** so support engineers could surface similar service records, accelerating time-to-resolution.
- Built and deployed a **data platform on IBM Cloud**, automating hours of manual analytics for support teams.
- Prototyped interdisciplinary **VR / AR** experiences (Unity / C#, Kinect, HoloLens) exploring how people relate to technology across the physical / virtual boundary.

Community & Developer Relations

- **Building in public:** maintain a multi-year body of **Notion-API and MCP** work on GitHub.
- **Digital community:** grew a startup's Discord community abroad; comfortable both one-to-one with individual builders and writing for larger audiences.
- **Guiding people through change:** years spent translating breaking technical change into docs, release notes, and client enablement.
- **Early leadership:** championed **transparent, automated operations** in my college fraternity (APD, CU Boulder) an early instinct for organizing a community around better tooling.
- **Building at sea (in progress):** I live aboard *MARGARITA*, a 1966 sailboat on the SF Bay, and run my software work from it. I'm starting an **"Adventure-Tech" gathering** bringing engineers, founders, and sailors together on the water for lightning talks and skill-swaps. It's early, and it's the most

"me" form of community-building: an unconventional venue for genuine, in-person developer connection.

Education & Certifications

- **B.S. Information Science**, University of Colorado Boulder — GPA 3.7 (May 2023); Certificate of Cognitive Science
- **Systems & Solutions Architecture Professional Certificate** (2026)
- **Deep Learning Specialization & TensorFlow Developer Professional Certificate** ([DeepLearning.AI](#) / Coursera)
- EMT — RC Health Services (2024)
- AIARE 1 Avalanche Safety (2022)
